Model Zoo

Problem Statement:

To Develop a collection of pre trained Deep Learning Models. To develop a Repository which can be referenced by anyone for accessing pre trained models or for training their models.

Description:

The project aims to develop an online repository which can be used for accessing pre trained models or for training the standard DL models on new data. It should give users a simple way of loading data and models and starting the training in very few steps.

Requirements:

Training Standard DL models. Developing professional level code for training and testing those models on any data.

Tech-stack:

Deep Learning (Prior Experience in model training is must.)
